

ProVU

1/4 DIN temperature controller / profiler with **data logging**

save space, less wiring... reduce cost

For applications that require single loop control with basic or advanced functionality, the optional datalogging feature saves costs by eliminating the need for an additional data recorder.

Simple to use	Graphic/text HMI with logical screen layout.
Easy to retrofit	Standard 1/4 DIN format, add functionality in the same space as your old controller.
Record process data	Simple-to-use and affordable data-logging.
Easy to program	Setup wizard makes configuration simple.
High visibility alarms	Colour change LCD (green/red).
Fast reconfiguration	Front USB port to download configuration and logged files locally.

Affordable process control with graphic and text display

ProVU Advanced temperature controller... simple to use

Temperature/Process Control

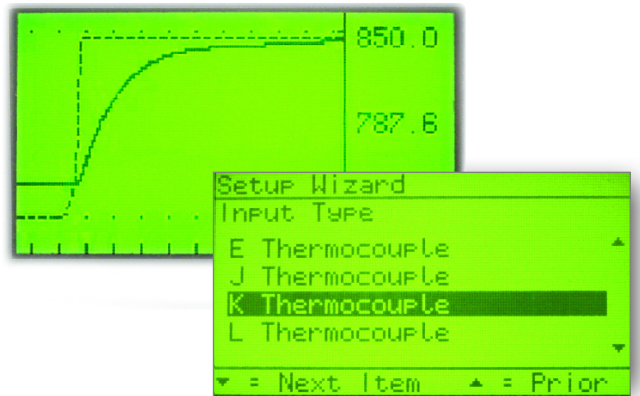

- Easy setup wizard
- Flexible output options
- Universal input for temperature sensor or linear process signals

Profiling

- 255 segments in up to 64 programs
- Up to 5 event outputs
- Delayed or real-time start

Datalogging

- Log process data (process, setpoints, alarms)
- logging intervals from 1s to 30m
- Export data via USB or comms
